

## MP Touch 2

### A device to remotely control entrance gates from a single station

The MP Touch 2 is a device that allows the user to remotely control the Gunnebo Entrance Control product range from either a single or multiple locations. This could be a reception desk or security office. The full colour touch screen is used to change the operational status of the unit/s.

The main gate control features a scrolling screen, where you can select the desired gate or gates to change their operational status. The central area displays an image of the product and a padlock button is available to lock the controller to prevent fraudulent use.

The MP Touch 2 also provides useful reporting, including passage counts and time profiles for automatic gate mode changes.

This product comes with a built-in web interface used to configure the system. It is possible to simply connect directly across the network, with a web-enabled device. There is no need for special connectors or software. This interface sets up the areas and gates that are seen on the MP Touch 2.

The MP Touch 2 comes with a higher resolution 10" Screen allowing more information to be displayed on the screen. A high specification graphics processor allows for intuitive and fluid UI design. This

means it not only looks good, but is easy to use as well.

The screen is a capacitive touch screen which allows for a lighter touch and the use of finger gestures to control the UI.

#### KEY FEATURES

- Modernised UI - intuitive fluid design
- Sleek enclosure to suit any desk
- Bigger clearer screen - no need for external display

## The Interface Explained

### Main Gate Control

When the MP Touch is first started up, it will display this interface.

1. Area select, press this to select which area you want to control
2. Gate selection, press the gate you want to set the state for
  - Also shows at a glance the entry and exit states
  - The bottom tab indicates which gate is selected
  - The tab will appear red in a fault or emergency situation
3. Lock icon, this will take you back to the password and user screen
4. On screen Emergency button.
5. Multi- Select Icon
6. Quick select icon

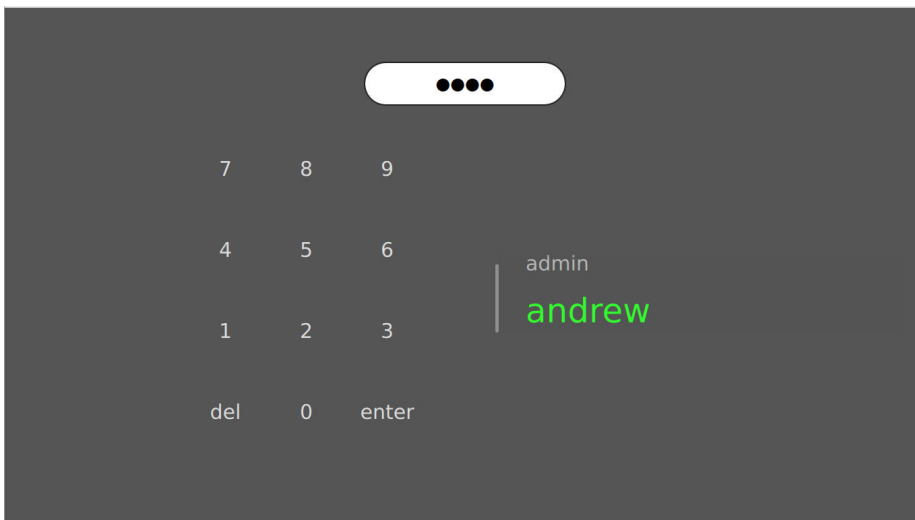

## The Interface Explained

### Security Features

Pressing the Padlock Icon locks the screen, i.e. When the receptionist/security officer leaves their work station.

The interface will then change to the following key pad interface.

Entering the standard 4 digit PIN number here will unlock the screen back to the Main Gate Control.

Entering the 6 digit administration password will take you forward to the administration interface.

## The Interface Explained

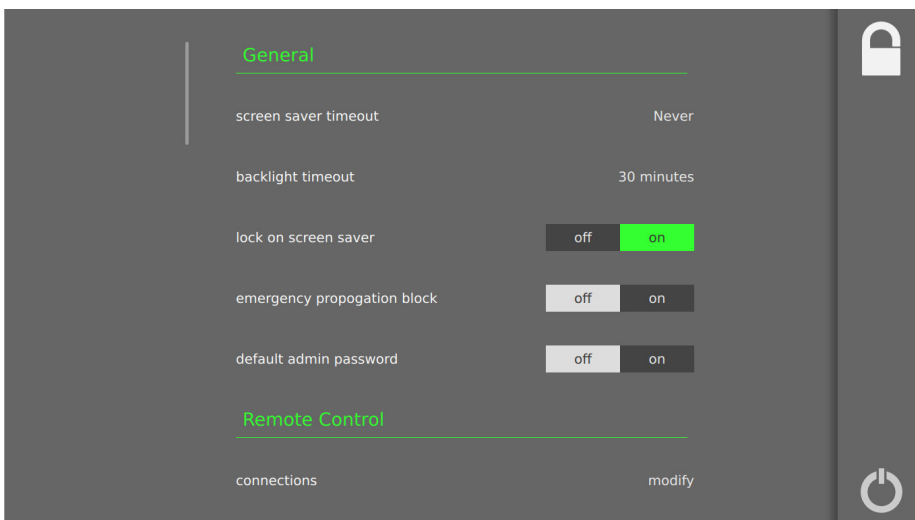

### Security Breach

In the event of a security breach, the unit can override the current set up of the gates and lock all lanes. Also, selecting the unit and then pressing the Card icon will release each individual lane once the incident is cleared. alternatively you can press the emergency button a second time to release all units.

### Administration

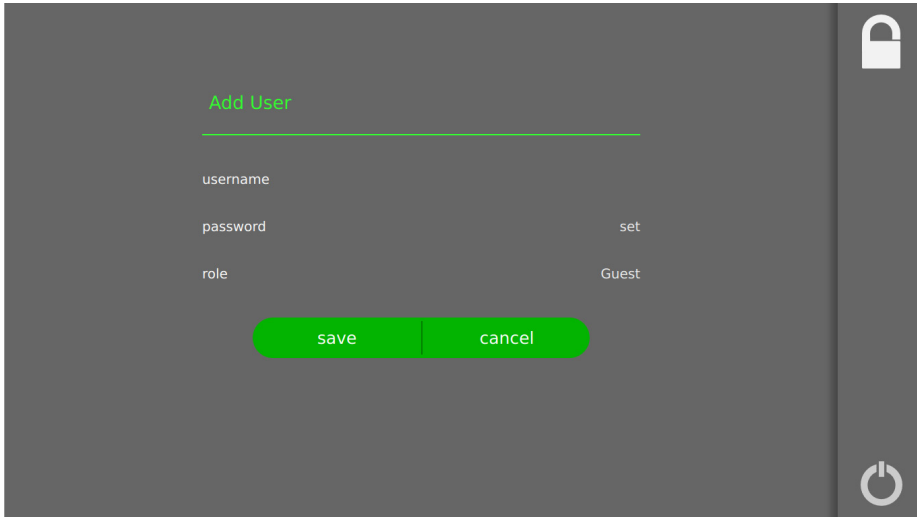

This interface gives access to more advanced features of the MP Touch 2.

## The Interface Explained

### Time Profile

Time profiles allow the user to change the gate modes automatically based on matching rules to the current time and date.
